Web Page Design

CSS Opacity and CSS Image Sprites

HAIDER M. HABEED

CSS Opacity

- Creating transparent images with CSS is easy.
- **Note:** The CSS opacity property is a part of the W3C CSS3 recommendation.

CSS Opacity

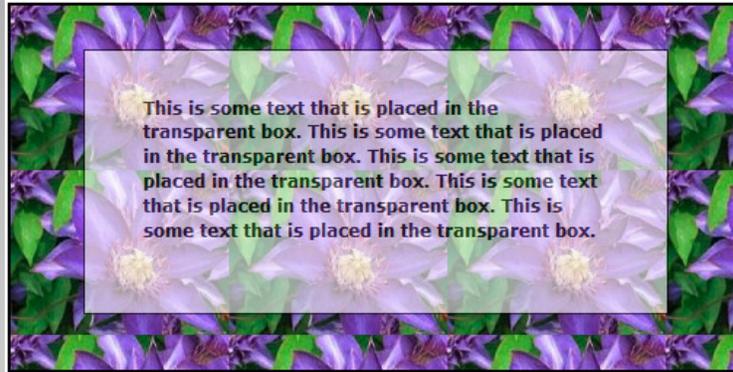

```
img
{
opacity:0.4;
filter:alpha(opacity=40); /* For IE8 and earlier */
}
```

CSS Opacity

```
img
{
opacity:0.4;
filter:alpha(opacity=40); /* For IE8 and earlier */
}
img:hover
{
opacity:1.0;
filter:alpha(opacity=100); /* For IE8 and earlier */
}
```

CSS Opacity

CSS Opacity

CSS Image Sprites

- An image sprite is a collection of images put into a single image.
- A web page with many images can take a long time to load and generates multiple server requests.
- Using image sprites will reduce the number of server requests and save bandwidth.

CSS Image Sprites

THANK YOU
