2.30 Two cables are tied together at C and loaded as shown. Determine the tension in AC and BC.

\[
\frac{T_{BC}}{\sin 40^\circ} = \frac{200}{\sin 80^\circ}
\]

\[
T_{BC} = \frac{\sin 40^\circ}{\sin 80^\circ} \times 200
\]

\[
T_{BC} = 130.5 \text{ lb}
\]

\[
\frac{T_{AC}}{\sin 60^\circ} = \frac{200}{\sin 80^\circ}
\]

\[
T_{AC} = \frac{\sin 60^\circ}{\sin 80^\circ} \times 200
\]

\[
T_{AC} = 175.9 \text{ lb}
\]

2.34 A 600-lb block is supported by the two cables AC and BC. (a) For what value of \( \alpha \) is the tension in cable AC minimum. (b) what are the corresponding values of the tension in cables AC and BC.

\[
T_{AC} \perp T_{BC}
\]

\[
\therefore \alpha = 30^\circ
\]

\[
\frac{T_{AC}}{\sin 30^\circ} = \frac{600}{\sin 90^\circ}
\]

\[
T_{AC} = \frac{\sin 30^\circ}{\sin 90^\circ} \times 600
\]

\[
T_{AC} = 300 \text{ lb}
\]

\[
\frac{T_{BC}}{\sin 60^\circ} = \frac{600}{\sin 90^\circ}
\]

\[
T_{BC} = 520 \text{ lb}
\]
2.37 Two ropes are tied together at C. If the maximum permissible tension in each rope is 750 lb, what is the maximum force $F$ that may be applied? In what direction must this maximum force act?

$$T_{AC} = T_{BC} = T_{\text{max}} = 750 \text{ lb}$$

$$\Sigma F_x = 0$$

$$F \cos \alpha + T_{BC} \cos 50^\circ - T_{AC} \cos 20^\circ = 0$$

$$F \cos \alpha + 750 \cos 50^\circ + 750 \cos 20^\circ = 0$$

$$F \cos \alpha - 222.678 = 0$$

$$F = \frac{222.678}{\cos \alpha} \quad \text{.........................(1)}$$

$$\Sigma F_y = 0$$

$$F \sin \alpha - T_{BC} \sin 50^\circ - T_{AC} \sin 20^\circ = 0$$

$$F \sin \alpha - 750 \sin 50^\circ - 750 \sin 20^\circ = 0$$

$$F \sin \alpha = 831.048 \quad \text{.........................(2)}$$

From (1) and (2)

$$\frac{222.678}{\cos \alpha} \sin \alpha = 831.048$$

$$\tan \alpha = \frac{831.048}{222.678} = 3.732$$

$$\alpha = 74.9998^\circ$$

$$F = 860.36 \text{ lb}$$
2.38 Two strings are tied together at C. Determine the tension in AC and BC.

\[ \alpha = \tan \frac{24}{3} = 82.87^\circ \]

\[ \Sigma F_x = 0 \]

\[ 25 \cos 30^\circ + 25 \cos 30^\circ - T_{AC} \cos \alpha - T_{BC} \cos \alpha = 0 \]

\[ (T_{AC} + T_{BC}) \cos 82.87^\circ = 43.3 \]

\[ T_{AC} + T_{BC} = 348.853 \] \hspace{1cm} (1)

\[ \Sigma F_y = 0 \]

\[ 25 \sin 30^\circ - 25 \sin 30^\circ - T_{AC} \sin \alpha - T_{BC} \sin \alpha = 0 \]

\[ T_{AC} \sin \alpha = T_{BC} \sin \alpha \]

\[ T_{AC} = T_{BC} \] \hspace{1cm} (2)

from (1) and (2)

\[ T_{AC} + T_{AC} = 348.853 \]

\[ 2T_{AC} = 348.853 \]

\[ T_{AC} = 174.42 lb \]

\[ T_{BC} = 174.42 lb \]

---

2.40 Two forces \( P \) and \( Q \) are applied to the aircraft connection shown. At a certain instant, when the connection is in equilibrium, it is found that \( T_1 = 560 \) lb and \( T_2 = 120 \) lb. Determine the corresponding values of \( P \) and \( Q \).

\[ \Sigma F_x = 0 \]

\[ T_1 - T_2 \cos 60^\circ - Q \cos 15^\circ = 0 \]

\[ Q = \frac{560 + 120 \cos 60^\circ}{\cos 15^\circ} \]

\[ Q = 641.87 lb \]

\[ \Sigma F_y = 0 \]

\[ T_2 \sin 60^\circ - Q \sin 15^\circ - P = 0 \]

\[ P = 120 \sin 60^\circ + 641.87 \sin 15^\circ \]

\[ P = 270 lb \]
2.44 A 1,500-lb crate is lifted by a crane cable $CD$. A cable sling $ACB$ is 5 ft long and can be attached to the crate in each of the two ways shown. Determine the tension in the cable sling in each case.

$T_{CD} = 1500 lb$

(a) $\alpha_1 = \cos^{-1} \frac{1.5}{2.5} = 53.13^\circ$

$\Sigma F_x = T_{AC} \cos \alpha_1 - T_{BC} \cos \alpha_1 = 0$

$T_{AC} = T_{BC}$ \hspace{1cm} (1)

$\Sigma F_y = T_{CD} - T_{AC} \sin \alpha_1 - T_{BC} \sin \alpha_1 = 0$

$T_{CD} - 2T_{AC} \sin 53.13^\circ = 0$

$T_{AC} = \frac{1500}{2 \sin 53.13^\circ} = 937.5 lb$

$T_{BC} = 937.5 lb$

(b) $\alpha_2 = \cos^{-1} \frac{2}{2.5} = 36.869^\circ$

$\Sigma F_x = T_{AC} \cos \alpha_2 - T_{BC} \cos \alpha_2 = 0$

$T_{AC} = T_{BC}$ \hspace{1cm} (2)

$\Sigma F_y = T_{CD} - T_{AC} \sin \alpha_2 - T_{BC} \sin \alpha_2 = 0$

$T_{CD} - 2T_{AC} \sin 36.869^\circ = 0$

$T_{AC} = \frac{1500}{2 \sin 36.869^\circ} = 1250 lb$

$T_{BC} = 1250 lb$

2.45 A portable bin and its contents weigh 750 lb. Determine the shortest chain sling $ACB$ which may be used to lift the loaded bin if the tension in the chain sling is not to exceed 900 lb.

$w = 750 lb; T_{\text{max}} = 900 lb$

$T_c = w = 750 lb$

$\Sigma F_x = -T_{AC} \cos \theta + T_{BC} \cos \theta = 0$

$T_{AC} = T_{BC} = 900 lb$

$\Sigma F_y = T_c - T_{AC} \sin \theta - T_{BC} \sin \theta = 0$

$750 - 900 \sin \theta - 900 \sin \theta = 0$

$1800 \sin \theta = 750 \Rightarrow \sin \theta = \frac{750}{1800}$

$\sin \theta = 0.41667 \Rightarrow \theta = 24.624^\circ$

$L = \frac{32}{2 \cos \theta} \Rightarrow L = 35.2 ft$
