هَرَم مَاسْلَو للحَاجَات الإِنسَانِيَة؟

حاجة تحقيق الذات

حاجات التقدير والاحترام

حاجات اجتماعية

حاجة الأمان

الحاجات الفسيولوجية

الحاجات الفسيولوجية:

هي عبارة عن الحاجات الأساسية لبقاء حياة الإنسان وتمتاز بأنها فطرية كما تعتبر نقطة البداية في الوصول إلى اشباع حاجات أخرى وهي عامة لجميع البشر إلا أن الاختلاف يعود إلى درجة الإشباع المطلوبة لكل فرد حسب حاجته، وأن العمل الذي يحقق هذه الحاجات إلى قدر معين سيكون موضوع قبول ورضًا من العاملين.

الحاجات إلى الأمان:

يعتمد تحقيقها على مقدار الإشباع المحقق من الحاجات الفسيولوجية فهي مهمة للفرد فهو يسعى إلى تحقيق الأمن والطمأنينة له لأولاده كذلك يسعى إلى تحقيق الأمن في العمل سواء من ناحية تأمين الدخل أو حمايته من الأخطار الناتجة عن العمل وإن شعور الفرد بعدم تحقيق هذه الحاجة يؤدي إلى انخفاضه فكريًا ونفسياً مما يؤثر على أدائه في العمل لهذا على الإدارة أن تدرك أهمية حاجة الأمن للعامل لخلق روح من الإبداع بين العاملين.

الحاجات الاجتماعية:

إن الإنسان اجتماعي بطبعه يرغب إن يكون محبوباً من الآخرين عن طريق انتظامه للاخرين ومشاركته لهم في مبادئه وشعاراتهم التي تحدد مسيرة حياته، وأن العمل الذي يزاوله العامل فيه
فرصة لتحقيق هذه الحاجة عن طريق تكوين علاقات ود وصداقية مع العاملين معه وقد أوضحت الدراسات أن جو العمل الذي لا يستطيع إشاعه هذه الحاجات يؤدي إلى اختلاف التوازن النفسي لدى العاملين ومن ثم إلى مشكلات عمالية تؤدي إلى نقص الإنتاج وارتفاع معدلات العياب وترك العمل وهذا يجعل التنظيم يفشل في تحقيق أهدافه.

 حاجات التقدير:

شعور العامل بالثقة وحصوله على التقدير والاحترام من الآخرين يحسسه بمكانته.

هذه الحاجة تشعر الفرد بأهميته وقيمة ما لديه من إمكانات ليست którym في تحقيق أهداف المشروع لهذا تعتبر من وظائف المدير لذلك إن المدراء الذين يركزون على حالات التقدير كمحرك لدوافع العاملين تحقق أهداف مشاريعهم على عكس من يقلل من إمكانات الفرد في التنظيم هذا ويجعل الاستفادة منه محدودة ويخلق مشكلات بين الفرد والتنظيم.

الحاجة إلى تحقيق الذات:

أي تحقيق طموحات الفرد العليا في إن يكون الإنسان ما يريد أن يكون وهي المرحلة التي يصل فيها الإنسان إلى درجة مميزة عن غيره ويصبح له كيان مستقل ويعتبر الحاجة إلى الاستقلال من أهم مكونات هذه الحاجة حيث تظهر منذ مرحلة الطفولة وتنمو مع تقدمه في العمر وينضج وبالتالي يبدأ بتحرر من الاعتماد على الغير.

وينظر الفرد إلى الاستقلال في العمل عند منحة الحرية في تنفيذ الأعمال وبالتالي يستغل ما لديه من مواهب وقدرات فردية.
Maslow's Theory of Motivation - Hierarchy of Needs

In 1943, Dr. Abraham Maslow's article "A Theory of Human Motivation" appeared in Psychological Review, which were further expanded upon in his book: Toward a Psychology of Being. In this article, Abraham H. Maslow attempted to formulate a needs-based framework of human motivation and based upon his clinical experiences with people, rather than as did the prior psychology theories of his day from authors such as Freud and B.F. Skinner, which were largely theoretical or based upon animal behavior. From this theory of motivation, modern leaders and executive managers find means of motivation for the purposes of employee and workforce management. Abraham Maslow's book Motivation and Personality (1954), formally introduced the Hierarchy of Needs.

The basis of Maslow's motivation theory is that human beings are motivated by unsatisfied needs, and that certain lower factors need to be satisfied before higher needs can be satisfied. According to Maslow, there are general types of needs (physiological, survival, safety, love, and esteem) that must be satisfied before a person can act unselfishly. He called these needs "deficiency needs." As long as we are motivated to satisfy these cravings, we are moving towards growth, toward self-actualization. Satisfying needs is healthy, while preventing gratification makes us sick or act evilly.

As a result, for adequate workplace motivation, it is important that leadership understands the active needs active for individual employee motivation. In this manner, Maslow's model indicates that fundamental, lower-order needs like safety and physiological requirements have to be satisfied in order to pursue higher-level motivators along the lines of self-fulfillment. As depicted in the following hierarchical diagram, sometimes called 'Maslow's Needs Pyramid' or 'Maslow's Needs Triangle', after a need is satisfied it stops acting as a motivator and the next need one rank higher starts to motivate.
Self-Actualization

Self-actualization is the summit of Maslow's motivation theory. It is about the quest of reaching one's full potential as a person. Unlike lower level needs, this need is never fully satisfied; as one grows psychologically there are always new opportunities to continue to grow.

Self-actualized people tend to have motivators such as:

- Truth
- Justice
- Wisdom
- Meaning

Self-actualized persons have frequent occurrences of peak experiences, which are energized moments of profound happiness and harmony. According to Maslow, only a small percentage of the population reaches the level of self-actualization.

Esteem Needs

After a person feels that they "belong", the urge to attain a degree of importance emerges. Esteem needs can be categorized as external motivators and internal motivators.

Internally motivating esteem needs are those such as self-esteem, accomplishment, and self respect. External esteem needs are those such as reputation and recognition.

Some examples of esteem needs are:

- Recognition (external motivator)
- Attention (external motivator)
- Social Status (external motivator)
- Accomplishment (internal motivator)
- Self-respect (internal motivator)
Maslow later improved his model to add a layer in between self-actualization and esteem needs: the need for aesthetics and knowledge.

**Social Needs**

Once a person has met the lower level physiological and safety needs, higher level motivators awaken. The first level of higher level needs are social needs. Social needs are those related to interaction with others and may include:

- Friendship
- Belonging to a group
- Giving and receiving love

**Safety Needs**

Once physiological needs are met, one's attention turns to safety and security in order to be free from the threat of physical and emotional harm. Such needs might be fulfilled by:

- Living in a safe area
- Medical insurance
- Job security
- Financial reserves

According to the Maslow hierarchy, if a person feels threatened, needs further up the pyramid will not receive attention until that need has been resolved.

**Physiological Needs**

Physiological needs are those required to sustain life, such as:

- Air
- Water
- Food
- Sleep

According to this theory, if these fundamental needs are not satisfied then one will surely be motivated to satisfy them. Higher needs such as social needs and esteem are not recognized until one satisfies the needs basic to existence.

**Applying Maslow's Needs Hierarchy - Business Management Implications**

If Maslow's theory is true, there are some very important leadership implications to enhance workplace motivation. There are staff motivation opportunities by motivating each employee through their style of management, compensation plans, role definition, and company activities.
• Physiological Motivation: Provide ample breaks for lunch and recuperation and pay salaries that allow workers to buy life's essentials.
• Safety Needs: Provide a working environment which is safe, relative job security, and freedom from threats.
• Social Needs: Generate a feeling of acceptance, belonging, and community by reinforcing team dynamics.
• Esteem Motivators: Recognize achievements, assign important projects, and provide status to make employees feel valued and appreciated.
• Self-Actualization: Offer challenging and meaningful work assignments which enable innovation, creativity, and progress according to long-term goals.

Remember, everyone is not motivated by same needs. At various points in their lives and careers, various employees will be motivated by completely different needs. It is imperative that you recognize each employee's needs currently being pursued. In order to motivate their employees, leadership must be understand the current level of needs at which the employee finds themselves, and leverage needs for workplace motivation.

**Maslow's Theory - Limitations and Criticism**

Though Maslow's hierarchy makes sense intuitively, little evidence supports its strict hierarchy. Actually, recent research challenges the order that the needs are imposed by Maslow's pyramid. As an example, in some cultures, social needs are placed more fundamentally than any others. Further, Maslow's hierarchy fails to explain the "starving artist" scenario, in which the aesthetic neglects their physical needs to pursuit of aesthetic or spiritual goals. Additionally, little evidence suggests that people satisfy exclusively one motivating need at a time, other than situations where needs conflict.

While scientific support fails to reinforce Maslow's hierarchy, his thery is very popular, being the introductory motivation theory for many students and managers, worldwide. To handle a number of the issues of present in the Needs Hierarchy, Clayton Alderfer devised the **ERG theory**, a consistent needs-based model that aligns more accurately with scientific research.
